ACACIA IMPLEXA

Acacia implexa is a fast-growing Australian tree with pale bark, narrow leaves, and creamy-yellow flowers, growing to around 5–15 metres tall.

ACACIA MEARNSII

Acacia mearnsii (black wattle) is a fast growing tree native to Australia, with dark bark, feathery leaves, and fluffy cream-colored flowers. Growing to around 5–8 metres in height.

ACACIA MELANOXYLON

Acacia melanoxylon (blackwood) is a tall Australian tree with long curved leaves and pale yellow flower clusters. Growing to 10–30 metres in height.

ACACIA PYCNANTHA

Acacia pycnantha (golden wattle) is Australia's national floral emblem. It is a small tree or large shrub with dark green phyllodes and bright golden-yellow flower clusters that bloom in late winter to spring. Growing to around 3–8 metres tall.

ACACIA RETINODES

Acacia retinodes (swamp wattle) is a hardy Australian shrub or small tree with smooth green leaves and bright yellow, rod-like flowers that can bloom at different times of the year. Growing to 5–8 metres in height.

ACACIA VERTICILLATA

Acacia verticillata (prickly moses) is a dense Australian shrub with sharp, needle-like leaf structures and long, bright yellow flower spikes. Usually reaching around 2–5m tall.

BANKSIA MARGINATA \$3.95EA

Banksia marginata (silver banksia) is a versatile Australian shrub or small tree with narrow, serrated leaves and cylindrical pale yellow flower spikes, typically growing to around 2–8 metres tall depending on conditions.

CALLISTEMON RUGULOSUS

Callistemon rugulosus (scarlet bottlebrush) is an Australian shrub or small tree with narrow leaves and bright red, brush-like flower spikes, generally growing to around 2–3 metres tall.

CALLISTEMON CITRINUS

Callistemon citrinus (crimson bottlebrush) is an Australian shrub or small tree with narrow, aromatic leaves and bright red, brush-like flower spikes, generally growing to around 2–4 metres in height.

CALLISTEMON SIEBERI

Callistemon sieberi (river bottlebrush) is an Australian shrub or small tree with narrow leaves and pale cream to yellow bottlebrush flower spikes, typically growing to around 2–4 metres tall.

CASUARINA CUNNINGHAMIANA

Casuarina cunninghamiana (river sheoak) is a tall Australian tree with fine, needle-like branchlets and small cone-like fruit. It can reach heights of around 15–35 metres.

CORYMBIA CITRIODORA

Corymbia citriodora (lemon-scented gum) is a tall Australian eucalyptus with smooth pale bark, narrow leaves, and a strong lemon scent. It produces white flower clusters and typically grows to around 25–50 metres in height.

CORYMBIA FICIFOLIA

Corymbia ficifolia (red flowering gum) is a small to medium Australian tree with rough bark, dense foliage, and large clusters of bright red, pink, or orange flowers. It typically grows to around 5–15 metres in height.

CORYMBIA MACULATA

Corymbia maculata (spotted gum) is a tall Australian tree with smooth bark that sheds in patches, lance-shaped leaves, and white flower clusters. It typically grows to around 30–45 metres in height.

Growth Height & Width are a guide only each plant is individual and may exceed the above
Please note

Farm cells are a great option for creating shelter belts, helping protect livestock, reduce wind impact, and prevent soil erosion. They're easy to plant, cost-effective, and ideal for improving overall farm productivity.

EUCALYPTUS MUELLERIANA

Corymbia muelleriana (yellow bloodwood) is an Australian tree with rough, tessellated bark, narrow leaves, and creamy white flower clusters. It typically grows to around 20–35 metres in height.

EUCALYPTUS GLOBULUS

Eucalyptus globulus (tasmanian blue gum) is a tall Australian tree with smooth, mottled bark, long narrow leaves, and white flowers. It typically grows to around 30–70 metres in height.

EUCALYPTUS OBLIQUA

Eucalyptus obliqua (stringybark) is a tall Australian tree with rough fibrous bark, broad green leaves, and white flowers. It typically grows to around 30–90 metres in height.

EUCALYPTUS SIDEROXYLON

Eucalyptus sideroxylon (red ironbark) is an Australian tree with dark, deeply furrowed ironbark, narrow leaves, and clusters of pink, red, or white flowers. It generally reaches around 10–35 metres in height.

EUCALYPTUS KITSONIANA

Eucalyptus kitsoniana (bog gum) is a small Australian tree or mallee with smooth bark, rounded juvenile leaves, and creamy white flowers. It generally reaches around 8 metres in height.

EUCALYPTUS VIMINALIS

Eucalyptus viminalis (manna gum) is a tall Australian tree with smooth white to grey bark, long narrow leaves, and creamy white flowers. It reaches around 30–50 metres in height.

EUCALYPTUS OVATA

Eucalyptus ovata (swamp gum) is an Australian tree with smooth grey bark, oval-shaped juvenile leaves, and white flowers. It generally reaches around 20 metres in height.

EUCALYPTUS CLADOCALYX

Eucalyptus cladocalyx (sugar gum) is an Australian tree with smooth, patchy bark, glossy green leaves, and creamy white flowers. It generally reaches around 10–35 metres in height.

EUCALYPTUS AROMAPHLOIA

Eucalyptus aromaphloia is an Australian tree with rough fibrous bark, narrow green leaves, and white flower clusters. It generally reaches around 10–25 metres in height.

HARDENBERGIA VIOLACEA

Hardenbergia violacea is a vigorous Australian climbing or trailing plant with dark green leaves and striking purple pea-shaped flowers. It typically grows as a groundcover or vine, reaching around 1–3 metres in height, and spreads widely when supported.

LEPTOSPERMUM LANIGERUM

Leptospermum lanigerum (woolly tea-tree) is an Australian shrub or small tree with soft, narrow leaves and white to pale pink flowers. It generally grows to around 3–10 metres in height.

LEPTOSPERMUM CONTINENTALE

Leptospermum continentale (prickly tea-tree) is an Australian shrub with small, narrow leaves and white to pale pink flowers. It generally grows to around 1–3 metres in height.

LEPTOSPERMUM SCOPARIUM

Leptospermum continentale (prickly tea-tree) is an Australian shrub with small, narrow leaves and white to pale pink flowers. It generally grows to around 1–3 metres in height.

LEPTOSPERMUM OBOVATUM

Leptospermum obovatum (river tea-tree) is an Australian shrub with small, rounded leaves and white flowers. It generally grows to around 2–4 metres in height.

LEPTOSPERMUM POLYGALIFOLIUM

Leptospermum polygalifolium (yellow tea-tree) is an Australian shrub or small tree with narrow green leaves and clusters of white flowers that age to cream or yellow. It generally grows to around 3–6 metres in height.

Growth Height & Width are a guide only each plant is individual and may exceed the above

MELALEUCA ARMILLARIS

Melaleuca armillaris (bracelet honey myrtle) is an Australian shrub or small tree with dense, fine foliage and creamy-white bottlebrush flower spikes. It generally grows to around 3–10 metres in height.

MELALEUCA DECUSSATA

Melaleuca decussata (totem poles) is an Australian shrub or small tree with dense, fine foliage and pale pink to purple bottlebrush flower spikes. It generally grows to around 2–4 metres in height.

MELALEUCA SQUARROSA

Melaleuca squarrosa (scented paperbark) is an Australian shrub with soft, aromatic leaves and creamy-white, bottlebrush-like flower spikes. It generally grows to around 2–5 metres in height.

MELALEUCA HALMATURORUM

Melaleuca halmaturorum (salt paperbark) is an Australian shrub or small tree with papery bark, small grey-green leaves, and creamy-white bottlebrush flowers. It generally grows to around 3–8 metres in height.

MELALEUCA ERICIFOLIA

Melaleuca ericifolia (swamp paperbark) is an Australian shrub or small tree with fine, needle-like leaves and creamy-white bottlebrush flower spikes. It generally grows to around 2–8 metres in height.

PINUS RADIATA. \$3.95EA

Pinus radiata (Monterey pine) is a fast-growing conifer with long needle-like leaves and large woody cones. It is widely planted for timber production and shelterbelts, and generally grows to around 20–50 metres in height.

FICINIA NODOSA

Ficinia nodosa (knobby club-rush) is a tough, grass-like Australian native plant with dense, upright clumps and small brownish flower clusters at the tips. It is commonly found in coastal and wetland areas and generally grows to around 0.5–1.5 metres in height.

POA LABILLARDIEREI

Poa labillardierei (common tussock grass) is a native Australian grass that forms large, soft, arching tussocks with fine green to blue-green foliage. It is commonly found in grasslands, woodlands, and along waterways and generally grows to around 0.5–1.5 metres in height.

POA SIEBERIANA

Poa sieberiana (snow grass) is a native Australian tussock-forming grass with fine, narrow leaves and dense clumps. It is commonly found in cooler regions and generally grows to around 0.3–1 metre in height.

CHRYSOCEPHALUM APICULATUM

Chrysocephalum apiculatum (common everlasting) is a low-growing Australian native herb with soft grey-green leaves and clusters of bright yellow, daisy-like flowers. It is commonly used in native gardens and generally grows to around 0.1–0.5 metres in height.
